See page C1.43 for wiring duct color and size availability. Not all sizes available for each duct type. Wirefill is based on 50% cross-sectional area.

Formula used to calculate fill capacity:

$$\text{Number of Wires} = \frac{\text{Duct W x H}}{1.75 \times (\text{Wire O.D.})^2}$$

See page C1.41 for explanation of wirefill formula.

Formula to approximate wiring duct size needed:

Wire O.D. for multiple wire types:

$$\text{Wire O.D.} = \frac{\sum (\text{Number of Wires} \times \text{Wire O.D.})}{\text{Number of Wires}}$$

Example:

15 wires with .165" O.D. = 15 x .165 = 2.475
 28 wires with .065" O.D. = 28 x .065 = 1.820
 16 wires with .125" O.D. = 16 x .125 = 2.000
59 total wires = 6.295

$$6.295 \div 59 = \text{Wire O.D.} = \boxed{.107}$$

- Determine the **number of wires** the duct will need to contain.
- Determine the **wire outside diameter** (for multiple wires see formula at left).
- Calculate the **wirefill comparison area** using the following formula:

$$\text{Wirefill Comparison Area} = \text{Number of Wires} \times [1.75 \times (\text{Wire O.D.})^2]$$

Example: Wirefill Comparison Area = 59 x [1.75 x (.107)²] = 59 x .020 = **1.182**

- Choose a Duct** with W x H equal to or greater than the result from step 3.

$$\text{Area of Selected Duct} \geq \text{Calculated Wirefill Comparison Area}$$

Example: For Duct Size .75" x 1.5" Duct Area = .75 x 1.5 = 1.125 sq. in.
 (No good 1.125 < 1.182)
 For Duct Size 1.5" x 1" Duct Area = 1.5 x 1 = 1.500 sq. in.
 (Good 1.500 > 1.182)

In the above example 1" x 1.5" duct or larger could also be used.

Wirefill is based on 50% cross-sectional area.

Formula used to calculate fill capacity:

$$\text{Number of Wires} = \frac{\text{Duct W x H}}{2.00 \times (\text{Wire O.D.})^2}$$

See page C1.41 for explanation of wirefill formula.

Formula to approximate wiring duct size needed:

- Determine the **number of wires** the duct will need to contain.
- Determine the **wire outside diameter** (for multiple wires see formula at left).
- Calculate the necessary **wirefill comparison area** using the following formula:

$$\text{Wirefill Comparison Area} = \text{Number of Wires} \times [2 \times (\text{Wire O.D.})^2]$$

Example: Wirefill Comparison Area = 59 x [2 x (.107)²] = 59 x .020 = 1.357
- Choose a Duct** with W x H equal to or greater than the result from step 3.

$$\text{Area of Selected Duct} \geq \text{Calculated Wirefill Comparison Area}$$

*Example: For Duct Size .75" x 1.5" Duct Area = .75 x 1.5 = 1.125 sq. in.
(No good 1.125 < 1.1357)
For Duct Size 1.5" x 1" Duct Area = 1.5 x 1 = 1.1500 sq. in.
(Good 1.500 > 1.357)*

6.295 ÷ 59 = Wire O.D. = .107

In the above example 1" x 1.5" duct or larger could also be used.

Wirefill Formula (Flush cover duct Types G, F, FS, D, H, HS, MC, NNC & TMC)

General Formula

PANDUIT Wiring Duct wirefills are calculated using the following general formula:

$$50\% \text{ Wirefill} = 50\% \text{ of } \left(\frac{\text{Usable Duct Area}}{\text{Wire Area}} \right)$$

Why use a 50% Wirefill?

As specified in NFPA79-2002 section 14.5.2, *Percentage Fills of Raceways (Ducts)*, a 50% wirefill is given as the maximum wirefill capacity in all PANDUIT Wiring Ducts. This helps ensure general safe wiring practices are followed. In actual practice, a 50% wirefill is the maximum amount of wiring the duct can hold given the additional airspace created between cables by non-uniform cable shapes, cable interlacing and cable packing factors.

What is the Usable Duct Area?

The usable area we define as the calculation of internal area that can be occupied by wires or cables.

Calculation of Internal Area

Since we use the outer channel dimensions in our calculation we make an adjustment in our formula for the thickness of material and for design elements that extend inside the channel.

Air Space Allotment

In our wirefill formula an adjustment is made to the channel internal area to account for “unusable” air space that will be present between cables when placed in the channel. Our formula assumes a uniform close packed or high-density cable arrangement (see diagram) (Note 1).

Considering these factors the usable duct area is equal to an average of 90% of the nominal area, or $(W \times H) \times .90$.

Wire Area

The wire area formula is converted to allow calculation using the cable diameter:

$$\begin{aligned} A_{\text{WIRE}} &= \pi r^2 \\ A_{\text{WIRE}} &= (\pi/4) \times D^2 \\ A_{\text{WIRE}} &= .785 \times D^2 \end{aligned}$$

Formula Derivation

Inserting the elements from above into the general formula results in the following:

$$50\% \text{ Wirefill} = .50 \left(\frac{(W \times H) \times .90}{.785 \times D^2} \right)$$

Simplifying this formula results in the formula used for wire fill calculation (Note 2):

$$50\% \text{ Wirefill} = \left(\frac{W \times H}{1.75 \times D^2} \right)$$

NOTE: When calculating wirefill capacity using the above formula, variables W, H and D must be expressed in same units (i.e. mm or inches).

¹ This calculation does not account for additional airspace created between cables by non-uniform cable shapes, cable interlacing and cable packing factors.
² The resulting formula is used for all PANDUIT Flush Cover Ducts, this excludes Type NE duct which has a different profile design that results in a divisor of $2.0 \times D^2$ (rather than $1.75 \times D^2$ as shown here) and Type H and HS Wiring Duct with a profile design that results in a divisor of $1.85 \times D^2$.

*Intrinsic Blue Color – IB

Intrinsic Blue wiring duct is made from the same lead-free PVC material as our standard PVC duct. Intrinsic Blue is an internationally recognized standard blue color that identifies the wiring duct as “incapable of releasing sufficient electrical or thermal energy under normal or abnormal conditions to cause ignition of a specific hazardous atmospheric mixture in its most easily ignited concentrations.”

The following is recommended to properly prepare the surface of the wiring duct/raceway and covers for the best adhesion of latex paint:

1. Clean surface with mild soap and water solution or mineral spirits with a clean lint free towel. Allow to dry.
2. Using a sanding pad (such as synthetic stripping pad or medium/fine steel wool), slightly roughen the surface to be painted.
3. Apply a coat of all-purpose 100% Acrylic primer and allow to dry.
4. Apply the desired topcoat of latex paint and allow to dry.
5. Install the wiring duct/raceway and covers.
